PROFESSIONAL SUMMARY

AI/ML Enthusiast and Microsoft Power Platform practitioner with experience building LLM-powered applications, RAG systems, and scalable AI solutions. Skilled in Power Apps, Power Automate, Dynamics 365, and generative AI technologies, with a strong focus on developing production-ready intelligent applications.

EDUCATION

B.Tech – Artificial Intelligence & Machine Learning | SRKR Engineering College, Bhimavaram | 2021–2025 | CGPA: 8.4

SKILLS

AI / ML	Python, TensorFlow, Keras, Scikit-learn, LangChain, LLM API's, Hugging Face, RAG
Microsoft Platform	Power Apps, Power Automate, Power BI, Dataverse, Power Virtual Agents, AI Builder
Enterprise Dev	C, Java, C#, .NET, SQL Server, Dynamics 365 (CRM / Customer Service)
Databases & Infra	MySQL, Vector Databases, Git, GitHub, VS Code
Web & Viz	HTML, CSS, JavaScript, React, FastAPI, Pandas, NumPy, Matplotlib, Tableau

EXPERIENCE

Cognizant Technology Solutions

Program Analyst Trainee | Jan 2026 – Present | Chennai, India

- Built Canvas and Model-Driven Apps on Power Apps with Dataverse data modelling, security roles, and business rules to automate enterprise workflows end-to-end.
- Engineered Power Automate cloud flows integrating SharePoint, Teams, and Outlook, eliminating manual approval bottlenecks across business units.
- Worked on Dynamics 365 CRM configurations — case management, SLA setup, entitlements, and queue routing..

Blackbucks Engineers

AI/ML Intern | Jul 2024 – Sep 2024

- Built a CNN classifier on the CIFAR-10 dataset from the ground up, pushing accuracy to 83% a 9% improvement over the baseline by carefully tuning hyperparameters, applying dropout regularisation, and integrating batch normalisation.
- Took ownership of the full training pipeline, from data augmentation and normalisation through to performance benchmarking, which meaningfully reduced the experimentation turnaround time for our 4-member team.

Henotic Technologies Pvt. Ltd.

Machine Learning Intern | Jun 2023 – Sep 2023

- Worked with large-scale datasets of 100000+ records to develop supervised ML models for both classification and regression tasks, with a strong focus on feature engineering and exploratory data analysis — ultimately cutting model error rates by 18%.
- Streamlined repetitive data preprocessing steps by building reusable Pandas and Scikit-learn pipelines, making experiments more reproducible and freeing up time across multiple model iterations.

PROJECTS

DOC Chat AI – Intelligent Document Assistant (RAG · LangChain · FastAPI) - [LINK](#)

- Architected a production-grade RAG pipeline with token chunking and vector search (ChromaDB/Pinecone), enabling semantic retrieval across PDF/DOC formats with speech-to-text input.

Video Insight Mapping Application (Whisper · Gemini API · React · FastAPI)

- Built a full-stack video analysis tool using OpenAI Whisper for transcription and Gemini API for context-aware keypoint summarisation, with a React frontend for multimodal interaction.

Robust Classification Model (Machine Learning)

- Engineered a Random Forest model with targeted feature selection and EDA, boosting F1 score by 14% over baseline across an imbalanced real-world dataset.

CERTIFICATIONS

- Prompt Engineering & Programming with OpenAI - [Link](#)
- GEN AI Fundamentals – Databricks - [Link](#)
- Power Platform Fundamentals (PL-900) - [Link](#)
- Power Platform Functional Consultant Associate (PL-200) - [Link](#)
